

TouchDMIS 10 – Press Release

FOR IMMEDIATE RELEASE – November 13, 2025

The latest release of TouchDMIS brings Industry 5.0 sustainability, expanded sensor support, and a smarter operator experience to CMM metrology.

TouchDMIS 10 (v10.0.0.230) is now available. This major release introduces the **Environment-Friendly Mode**, which automatically switches off the CMM air supply during standby — reducing energy consumption and supporting more sustainable shop floor operations.

On the integration side, TouchDMIS 10 adds full support for **Renishaw® REVO** (3-axis, 5-axis, helical, and sweep scanning), **Renishaw® SFP2** for in-software roughness inspection, and **PATLITE signal towers** for real-time visual and audible CMM status feedback.

For operators, this release delivers a faster and safer daily workflow: a **Quick Prompt Editor**, **NFC login authentication**, a **Last Actions toolbar**, and **EasyRunner 3.5** with barcode reader integration for fully automated program execution.

On the metrology side, **composite tolerance** and **pattern constructions** are now natively available, and GD&T feature control frames are displayed directly in report labels and the tolerance UI. The 5-axis control model has also been refined — replacing Tilt/Rotation with the more intuitive **Front/Side inclination** parameters for PH20 and REVO users.

TouchDMIS 10 is available now through the official distributor network.
